Cruise report FRV "Walther Herwig III" Cruise 378 22.09. – 02.10.2014

International Herring Larvae Survey in the North Sea

Scientist in charge: Dr. Norbert Rohlf

Summary

The cruise was part of the German contribution to the international herring larvae surveys in the North Sea (IHLS). These surveys are conducted during the autumn and winter herring spawning activity. The studies monitor the spatial distribution and abundance of herring larvae on an annual basis. They are coordinated by ICES. The survey time series dates back to 1972. Almost all countries surrounding the North Sea have participated in the history of the IHLS, while in recent years the Netherlands and Germany contribute most to the surveys. The resulting survey index is used as an important estimator of herring spawning stock biomass and provides valuable information for herring stock assessment and the fixation of fishing quotas.

While the Buchan area was surveyed as scheduled, not all stations could be done within the Orkney/Shetland region due to unfavourable weather conditions.

The spatial distribution of herring larvae east of the Orkneys was comparable to those in former years, while in the Buchan area, larvae were found more widely distributed compared to the most recent years.

However, conclusions for North Sea herring stock spawning biomass can only be drawn when information of larvae abundance from all spawning areas become available prior to the herring assessment working group meeting in March 2015.

2. Research programme

The cruise was a component of the international herring larvae surveys. Parts of ICES area IVa should be sampled by double oblique tows with the "Nackthai" (modified GULF III sampler), resulting in herring larval abundance estimates and spatial distribution.

In total, 115 plankton tows were done within the IHLS framework. Physical measurements, e.g. temperature, salinity and conductivity, were conducted via a CTD mounted directly onto the gulf sampler. Sampling was achieved according to the manual of the herring larvae surveys.

3. Narrative

FRV "Walther Herwig III" left Bremerhaven on Monday, 09/22/14, at noon. The area under investigation was reached just after midnight on Wednesday, 09/24/14. The weather conditions were adequate and plankton tows were done around the Orkneys within the next two days. At that time, the wind strength increased considerably up to 10 Beaufort. Field work had to be stopped, awaiting the latest weather forecast. Soon it became obvious that the overall situation for the north-western part of the area under investigation would not change. High waves and strong westerly winds had to be expected as persistent for the next days and thus sampling north-west of the Orkneys would be impossible. Therefore it was decided to skip the remaining stations around the Islands and to steam southwards into the Buchan area, where field work seemed to be much more likely, given the shelter of the Scottish coastline.

We continued with plankton tows on Saturday at noon. All stations in the Buchan area could be sampled as scheduled. The IHLS programme was finished on Friday, 09/30/14 and FRV "Walther Herwig III" was back in Bremerhaven on Saturday evening. The vessel was disembarked the day after.

4. Preliminary results

Fish eggs and larvae were sorted from the plankton samples after the end of the cruise. Herring larvae were counted and their abundance per square metre estimated. Length measurements are still in progress and thus length-frequency plots cannot be shown yet.

In the Orkney/Shetland area, only 50 % of the stations could be sampled. However, herring larval spatial distribution is comparable to those in former years, while in the Buchan area, larvae have been found more widely distributed compared to the last year. The cruise track and the spatial distribution of herring larvae are given in Figure 1. Figure 2 depicts the distribution of near-bottom water temperature and salinity. Abundance estimates and available physical water parameters are listed in Table 1.

5. Participants

Name	Institution	Function
1. Norbert Rohlf	TI-SF	Cruise leader
2. Birgit Suer	TI-SF	Technician
3. Michael Sasse	TI-SF	Technician
4. Inken Rottgardt	TI-SF	Student
5. Heike Schwermer	TI-SF	Student
6. Peggy Weist	Uni Oldenburg	Volunteer
7. Lydia Kohlmorgen	Uni Oldenburg	Volunteer
8. Michael Winter	BMEL	Volunteer

6. Acknowledgement

Thanks to Captain Jürgen Vandrei and FRV "Walther Herwig III" crew members for their great support and hospitality and to all participants for their reliable and responsible teamwork.

7. Tables and Figures

Table 1: Main data of Ichthyoplankton hauls made during WH 378. Hauls 1-46 were done around the Orkneys, while 47-115 were conducted in the Buchan area.

(Dr. Norbert Rohl)

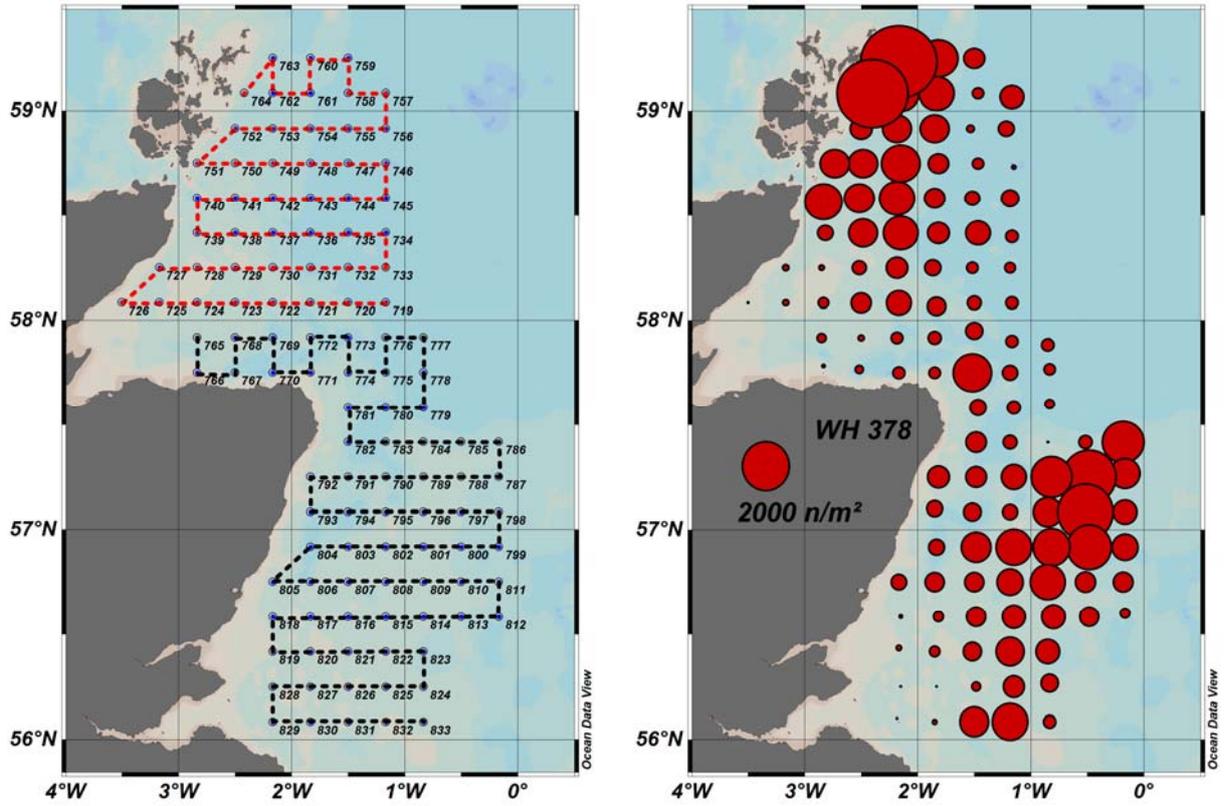

Figure 1: Cruise track in Orkney/Shetlands (dotted red line) and the Buchan area (dotted blue), (by station number, left panel) and corresponding abundance of herring larvae in the Orkney/Shetland and Buchan area (n/m^2 , right panel). The symbol size corresponding to 2000 larvae per square metre is indicated in the figure.

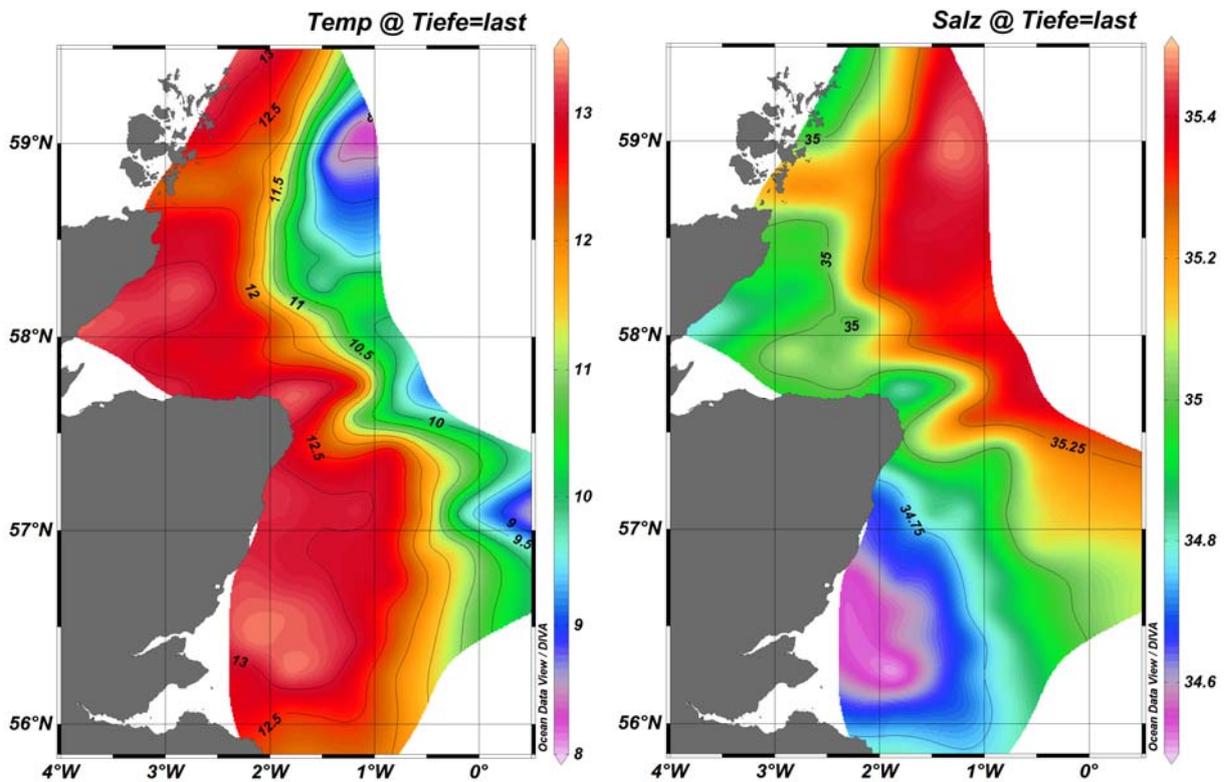

Figure 2: Distribution of near-bottom temperature ($^{\circ}C$, left panel) and salinity (psu, right panel) in the area under investigation
