**Cruise report
FRV "Walther Herwig III"
Cruise 381
05.01. – 14.01.2015**

**International Herring Larvae Survey in the North Sea
and German Small-scale Bottom Trawl Survey**

Scientist in charge: Dr. Norbert Rohlf

Summary

The cruise should survey the winter bottom fish assemblages in the German Bight and the abundance and distribution of fish larvae in the Southern North Sea.

The German Small-scale Bottom Trawl Survey (GSBTS) continued the long-term investigation of winter bottom fish assemblages through sampling of the standard area "Box A" in the German Bight. The mean catch yielded is lower compared to 2013, but in the same order of magnitude as the period 2007-2011.

Within the 10-by-10 nautical mile area in the Box, the GOV bottom trawls were accompanied by monitoring of the benthic epifauna with a 2-m beam trawl. Compared to preceding years, the epifauna in Box A was dominated by high numbers of the shrimp *Crangon crangon*, the bivalve *Nucula nitidosa* and the starfish *Asterias rubens*, while the goby *Pomatoschistus minutus* and the shrimp *Crangon allmanni* were less abundant.

The international herring larvae surveys in the North Sea (IHLS) are conducted annually during the autumn and winter herring spawning activity and monitor the spatial distribution and abundance of herring larvae. Unfortunately, the storm "Elon", "Felix", "Gunther" and following depressions prevented any sampling activity on herring larvae in the area under investigation. As a consequence, no larvae abundance index can be calculated for the Southern North in the first half of January this year.

2. Research programme

2.1 Herring larvae survey

One aim of the cruise was the German contribution to the international herring larvae surveys in the North Sea in January. Parts of ICES area IVc and VIIId should be sampled by double oblique tows with the "Nackthai" (modified GULF III sampler), resulting in herring larval abundance estimates and spatial distribution. Due to a number of storms entering the area under investigation, it was impossible to cover any of the stations in the IHLS programme.

2.2 Monitoring (TI-SF)

21 GOV hauls were taken to qualitatively and quantitatively analyze the development of abundance and diversity in the bottom fish assemblages. Methods are in accordance with the International Bottom Trawl Survey, in order to allow comparison of results between the two surveys. Epibenthos sampling with a 2-m beam trawl complemented the GOV hauls in order to allow simultaneous investigations of benthic invertebrates and bottom fish (Table 2).

2.3 Epibenthos (Senckenberg Research Institute)

The 2-m beam trawl for the sampling of epibenthos had a mesh size of 20 x 20 mm in the main net and 4 x 4 mm in the cod end and was applied with 5-min towing duration at 1.5 knots. Samples were sieved over 5 mm and 2 mm mesh. The 5 mm fraction was analysed aboard, the 2 mm fraction was preserved in 70% alcohol for analysis in the laboratory ashore.

2.4 Sediments and benthic infauna (Senckenberg Research Institute)

Investigations of epibenthos were accompanied by sampling of sediments using a 0.1 m² Van Veen grab for the analysis of sediment composition and total organic carbon (TOC).

3. Narrative

FRV "Walther Herwig III" left Bremerhaven on Monday afternoon, 01/05/15. The vessel steamed into the German Bight, where the fish and benthos monitoring was conducted within the next three days (01/06 – 01/08) in the area of investigation in Box A. The programme could be completed as planned, with 21 randomly assigned GOV trawl hauls and nine beam trawls and grab samples.

On Thursday evening, the vessel moved near to the Island of Helgoland, getting some shelter from the upcoming storm (forecasts wind speed up to 12 Beaufort). We decided to stay close to Helgoland for the next days, awaiting more moderate weather conditions to get the herring larvae programme started. Unfortunately, the weather conditions did not improve at all, neither in the German Bight nor in the English Channel. With the given wind speeds and waves heights, there was no chance to conduct any successful plankton sampling. On Tuesday morning (01/13/15), it became obvious that there was no good reason to await better conditions any longer. We left the position around Helgoland and streamed to Bremerhaven. The vessel was back in the port on Tuesday evening.

4. Preliminary results

4.1 Bottom Fishes (TI-SF)

The mean total catch of all bottom fishes in Box A (Figure 1) amounted to 111 kg per half hour trawl duration. This is lower as compared to 2013 (179 kg), but in the same order of magnitude as the period 2007-2011 (Figure 2). Dab (*Limanda limanda*), sprat (*Sprattus sprattus*) and herring (*Clupea harengus*) dominated the catches with on average 66, 21 and 18 kg per half hour haul, respectively (Table 3). Cod (*Gadus morhua*), plaice (*Pleuronectes platessa*) and flounder (*Platichthys flesus*) were caught with 2.2 (cod), 1.4 (plaice) and 0.7 kg (flounder), respectively. The amount of the striped red mullet (*Mullus surmuletus*) was relatively high in this year's survey (0.031 kg/30 min.).

4.2 Epibenthos (Senckenberg Research Institute)

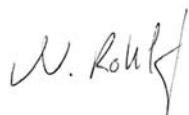

Nine beam trawl hauls and nine van Veen grab samples were undertaken in Box A. The sediment consisted of muddy fine sand. The epifauna in Box A was dominated by high numbers of the shrimp *Crangon crangon*, the bivalve *Nucula nitidosa* and the starfish *Asterias rubens*. These species occurred in remarkably higher abundances than in previous years. In contrast, high abundances of the goby *Pomatoschistus minutus* disappeared in the 2015 survey. Additionally, the shrimp *Crangon allmanni* was less abundant this year. In general, the mean biomass of the epifauna was estimated to be unusually high, most likely due to relatively high water temperatures during the winter 2014. With the tadpole fish *Raniceps raninus* we found a species, which was never observed before in any of the beam trawl hauls in Box A.

5. Participants

Name	Institution	Function
1. Norbert Röhl	TI-SF	Cruise leader
2. Birgit Suer	TI-SF	Technician
3. Sakis Kroupis	TI-SF	Technician
4. Christine Petersen-Frey	TI-SF	Technician
5. Michael Sasse	TI-SF	Technician
6. Heike Schwermer	TI-SF	Student
7. Tim Dudeck	TI-SF	Student
8. Dr. Hermann Neumann	Senckenberg	Scientist
9. Constanze Hammerl	Senckenberg	Student

6. Acknowledgement

Thanks to Captain Hans-Otto Janßen and FRV "Walther Herwig III" crew members for their great support and hospitality and to all participants for their reliable and responsible teamwork.

(Dr. Norbert Röhl)
